

VISITOR MANAGEMENT SYSTEM(VMS)

The Unipass® - VMS is a smart digital solution that automates and secures visitor registration, tracking, and access. It replaces manual logbooks with fast check-in options using QR codes, NFC, or smart IDs.

Visitors can pre-register or self-register via kiosks, with photo capture and badge printing for identification. The system supports contract-based visitor pre-registration and approval, ensuring authorized access in advance. It also includes vehicle entry registration for complete control of on-site movement. All visitor data is securely stored for audits and emergency roll calls, with real-time dashboards enhancing efficiency, security, and professionalism across organizations and facilities.

INTEGRATIONS

- National ID Card Reader
- Single Sign On
- KIOSK
- Biometrics
